Abstract

Introduction. Annually from cancer suffer more than 160 thousand people. Every day there are 442 new cases of cancer or 18 – per hour. January 1, 2011 on the account of cancer institutions in Ukraine there were more than 960,000 cancer patients, including 5,500 children. From cancer every day die 239 people or 10 – per hour. According to the American Cancer Society, about 1,3 million of women worldwide each year are diagnosed with cancer of mammary gland, and about 465 thousand die as a result of the disease. In 2009, the verified information of national cancer register fixed 15,487 women who first felt ill with cancer of mammary gland, died more than 7,500 thousand. 37% of patients - women of working age, and over 30% of women died from this oncopathology. Both in America and in Ukraine the cancer of mammary gland ranked first in the structure of cancer among women. In Chernivtsi region in 2009, were registered 2064 patients with cancer of mammary gland, which is 43,4 per 100 000 population. Methods and materials. The object of our study were women who suffered from the cancer of mammary gland, and were under medical care at the Regional Oncology Dispensary from 2009 to 2011. In 2009 there were 181 identified cases of cancer of mammary gland. Of those with malignant tumors – 147, with benign - 34. In 2010 - 190 observations, of which malignant - 168, benign - 28. In 2011 - 198 cases of this disease. Malignant tumors were 167, benign - 31. Results and conclusion. Thus, according to the retrospective study, patients stories of regional oncologic dispensary, the incidence of the cancer of mammary gland increased by 5% in 2010 and 10% in 2011 compared with the data in 2009. Also seen a tendency to change the correlation of benign tumors and cancers for the latter. That's why the cancer of mammary gland is extremely important question that draws attention of scientists, clinicians and needs to be developed new screening methods and methods of treatments.

Keywords: Cancer, mammary gland, malignant tumor
